

SiT8924B

Automotive AEC-Q100 Oscillator

Features

- AEC-Q100 with extended temperature range (-55°C to 125°C)
- Frequencies between 1 MHz and 110 MHz accurate to 6 decimal places
- Supply voltage of 1.8 V or 2.25 V to 3.63 V
- Excellent total frequency stability as low as ± 20 ppm
- Industry best G-sensitivity of 0.1 PPB/G
- Low power consumption of 3.8 mA typical at 1.8 V
- Standby mode for longer battery life
- LVCMOS/LVTTL compatible output
- Industry-standard packages: 2.0 x 1.6, 2.5 x 2.0, 3.2 x 2.5, 5.0 x 3.2, 7.0 x 5.0 mm x mm
- RoHS and REACH compliant, Pb-free, Halogen-free and Antimony-free

Applications

- Automotive, extreme temperature and other high-rel electronics
- Infotainment systems, collision detection devices, and in-vehicle networking
- Powertrain control

Electrical Characteristics

Table 1. Electrical Characteristics^[1,2]

All Min and Max limits are specified over temperature and rated operating voltage with 15 pF output load unless otherwise stated. Typical values are at 25°C and nominal supply voltage.

| Parameters | Symbol | Min. | Typ. | Max. | Unit | Condition |
|---|--------|------|------|------|---------|--|
| Frequency Range | | | | | | |
| Output Frequency Range | f | 1 | – | 110 | MHz | Refer to Table 13 to 15 for a list of supported frequencies |
| Frequency Stability and Aging | | | | | | |
| Frequency Stability | F_stab | -20 | – | +20 | ppm | Inclusive of Initial tolerance at 25°C, 1st year aging at 25°C, and variations over operating temperature, rated power supply voltage and load (15 pF \pm 10%) |
| | | -25 | – | +25 | ppm | |
| | | -30 | – | +30 | ppm | |
| | | -50 | – | +50 | ppm | |
| Operating Temperature Range | | | | | | |
| Operating Temperature Range (ambient) | T_use | -40 | – | +85 | °C | AEC-Q100 Grade 3 |
| | | -40 | – | +105 | °C | AEC-Q100 Grade 2 |
| | | -40 | – | +125 | °C | AEC-Q100 Grade 1 |
| | | -55 | – | +125 | °C | Extended cold AEC-Q100 Grade1 |
| Supply Voltage and Current Consumption | | | | | | |
| Supply Voltage | Vdd | 1.62 | 1.8 | 1.98 | V | All voltages between 2.25 V and 3.63 V including 2.5 V, 2.8 V, 3.0 V and 3.3 V are supported |
| | | 2.25 | – | 3.63 | V | |
| Current Consumption | Idd | – | 4.0 | 4.8 | mA | No load condition, f = 20 MHz, Vdd = 2.25 V to 3.63 V |
| | | – | 3.8 | 4.5 | mA | No load condition, f = 20 MHz, Vdd = 1.8 V |
| OE Disable Current | I_od | – | – | 4.5 | mA | Vdd = 2.5 V to 3.3 V, OE = Low, Output in high Z state |
| | | – | – | 4.3 | mA | Vdd = 1.8 V, OE = Low, Output in high Zstate |
| Standby Current | I_std | – | 2.6 | – | μ A | Vdd = 2.8 V to 3.3V, \overline{ST} = Low, Output is weakly pulled down |
| | | – | 1.4 | – | μ A | Vdd = 2.5 V, \overline{ST} = Low, Output is weakly pulled down |
| | | – | 0.6 | – | μ A | Vdd = 1.8 V, \overline{ST} = Low, Output is weakly pulled down |
| LVCMOS Output Characteristics | | | | | | |
| Duty Cycle | DC | 45 | – | 55 | % | All Vdd levels |
| Rise/Fall Time | Tr, Tf | – | 1.5 | 3 | ns | Vdd = 2.25 V - 3.63 V, 20% - 80% |
| | | – | 1.3 | 2.5 | ns | Vdd = 1.8 V, 20% - 80% |
| Output High Voltage | VOH | 90% | – | – | Vdd | IOH = -4 mA (Vdd = 3.0 V or 3.3 V) IOH = -3 mA (Vdd = 2.8 V and Vdd = 2.5 V) IOH = -2 mA (Vdd = 1.8 V) |
| Output Low Voltage | VOL | – | – | 10% | Vdd | IOL = 4 mA (Vdd = 3.0 V or 3.3 V) IOL = 3 mA (Vdd = 2.8 V and Vdd = 2.5 V) IOL = 2 mA (Vdd = 1.8 V) |

SiT8924B Automotive AEC-Q100 Oscillator

Table 1. Electrical Characteristics^[1,2] (continued)

| Parameters | Symbol | Min. | Typ. | Max. | Unit | Condition |
|----------------------------------|---------------------|------|------|------|-----------------|---|
| Input Characteristics | | | | | | |
| Input High Voltage | V _{IH} | 70% | – | – | V _{dd} | Pin 1, OE or \overline{ST} |
| Input Low Voltage | V _{IL} | – | – | 30% | V _{dd} | Pin 1, OE or \overline{ST} |
| Input Pull-up Impedance | Z _{in} | – | 100 | – | k Ω | Pin 1, OE logic high or logic low, or \overline{ST} logic high |
| | | 2 | – | – | M Ω | Pin 1, \overline{ST} logic low |
| Startup and Resume Timing | | | | | | |
| Startup Time | T _{start} | – | – | 5.5 | ms | Measured from the time V _{dd} reaches its rated minimum value |
| Enable/Disable Time | T _{oe} | – | – | 130 | ns | f = 110 MHz. For other frequencies, T _{oe} = 100 ns + 3 * cycles |
| Resume Time | T _{resume} | – | – | 5 | ms | Measured from the time \overline{ST} pin crosses 50% threshold |
| Jitter | | | | | | |
| RMS Period Jitter | T _{jitt} | – | 1.6 | 2.5 | ps | f = 75 MHz, 2.25 V to 3.63 V |
| | | – | 1.9 | 3.0 | ps | f = 75 MHz, 1.8 V |
| RMS Phase Jitter (random) | T _{phj} | – | 0.5 | – | ps | f = 75 MHz, Integration bandwidth = 900 kHz to 7.5 MHz |
| | | – | 1.3 | – | ps | f = 75 MHz, Integration bandwidth = 12 kHz to 20 MHz |

Notes:

- All electrical specifications in the above table are specified with 15 pF output load and for all V_{dd}(s) unless otherwise stated.
- The typical value of any parameter in the Electrical Characteristic table is specified for the nominal value of the highest voltage option for that parameter and at 25°C temperature.

Table 2. Pin Description

| Pin | Symbol | Functionality | |
|-----|-------------------------|---------------|---|
| 1 | OE/ \overline{ST} /NC | Output Enable | H ^[3] : specified frequency output L: output is high impedance. Only output driver is disabled. |
| | | Standby | H ^[3] : specified frequency output L: output is low (weak pull down). Device goes to sleep mode. Supply current reduces to I _{std} . |
| | | No Connect | Any voltage between 0 and V _{dd} or Open ^[3] . Specified frequency output. Pin 1 has no function. |
| 2 | GND | Power | Electrical ground ^[4] |
| 3 | OUT | Output | Oscillator output |
| 4 | VDD | Power | Power supply voltage ^[4] |

Figure 1. Pin Assignments
Notes:

- In OE or \overline{ST} mode, a pull-up resistor of 10 k Ω or less is recommended if pin 1 is not externally driven. If pin 1 needs to be left floating, use the NC option.
- A capacitor of value 0.1 μ F or higher between V_{dd} and GND is required.

SiT8924B Automotive AEC-Q100 Oscillator

Table 3. Absolute Maximum Limits

Attempted operation outside the absolute maximum ratings may cause permanent damage to the part. Actual performance of the IC is only guaranteed within the operational specifications, not at absolute maximum ratings.

| Parameter | Min. | Max. | Unit |
|--|------|------|------|
| Storage Temperature | -65 | 150 | °C |
| Vdd | -0.5 | 4 | V |
| Electrostatic Discharge | – | 2000 | V |
| Soldering Temperature (follow standard Pb free soldering guidelines) | – | 260 | °C |
| Junction Temperature ^[5] | – | 150 | °C |

Note:

5. Exceeding this temperature for extended period of time may damage the device.

Table 4. Thermal Consideration^[6]

| Package | θ_{JA} , 4 Layer Board (°C/W) | θ_{JA} , 2 Layer Board (°C/W) | θ_{JC} , Bottom (°C/W) |
|---------|--------------------------------------|--------------------------------------|-------------------------------|
| 7050 | 142 | 273 | 30 |
| 5032 | 97 | 199 | 24 |
| 3225 | 109 | 212 | 27 |
| 2520 | 117 | 222 | 26 |
| 2016 | 152 | 252 | 36 |

Note:

6. Refer to JE51 for θ_{JA} and θ_{JC} definitions, and reference layout used to determine the θ_{JA} and θ_{JC} values in the above table.

Table 5. Maximum Operating Junction Temperature^[7]

| Max Operating Temperature (ambient) | Maximum Operating Junction Temperature |
|-------------------------------------|--|
| 85°C | 95°C |
| 105°C | 115°C |
| 125°C | 135°C |

Note:

7. Datasheet specifications are not guaranteed if junction temperature exceeds the maximum operating junction temperature.

Table 6. Environmental Compliance

| Parameter | Condition/Test Method |
|----------------------------|---------------------------|
| Mechanical Shock | MIL-STD-883F, Method 2002 |
| Mechanical Vibration | MIL-STD-883F, Method 2007 |
| Temperature Cycle | JESD22, Method A104 |
| Solderability | MIL-STD-883F, Method 2003 |
| Moisture Sensitivity Level | MSL1 @ 260°C |

Notes:

- 10. All plots are measured with 15 pF load at room temperature, unless otherwise stated.
- 11. Phase noise plots are measured with Agilent E5052B signal source analyzer. Integration range is up to 5 MHz for carrier frequencies up to 40 MHz.

SiT8924B Automotive AEC-Q100 Oscillator

Programmable Drive Strength

The SiT8924 includes a programmable drive strength feature to provide a simple, flexible tool to optimize the clock rise/fall time for specific applications. Benefits from the programmable drive strength feature are:

- Improves system radiated electromagnetic interference (EMI) by slowing down the clock rise/fall time.
- Improves the downstream clock receiver's (RX) jitter by decreasing (speeding up) the clock rise/fall time.
- Ability to drive large capacitive loads while maintaining full swing with sharp edge rates.

For more detailed information about rise/fall time control and drive strength selection, see the [SiTime Application Notes section](#).

EMI Reduction by Slowing Rise/Fall Time

Figure 16 shows the harmonic power reduction as the rise/fall times are increased (slowed down). The rise/fall times are expressed as a ratio of the clock period. For the ratio of 0.05, the signal is very close to a square wave. For the ratio of 0.45, the rise/fall times are very close to near-triangular waveform. These results, for example, show that the 11th clock harmonic can be reduced by 35 dB if the rise/fall edge is increased from 5% of the period to 45% of the period.

Figure 16. Harmonic EMI reduction as a Function of Slower Rise/Fall Time

Jitter Reduction with Faster Rise/Fall Time

Power supply noise can be a source of jitter for the downstream chipset. One way to reduce this jitter is to speed up the rise/fall time of the input clock. Some chipsets may also require faster rise/fall time in order to reduce their sensitivity to this type of jitter. Refer to the [Rise/Fall Time Tables \(Table 7 to Table 11\)](#) to determine the proper drive strength.

High Output Load Capability

The rise/fall time of the input clock varies as a function of the actual capacitive load the clock drives. At any given drive strength, the rise/fall time becomes slower as the output load increases. As an example, for a 3.3 V SiT8924 device with default drive strength setting, the typical rise/fall time is 1 ns for 15 pF output load. The typical rise/fall time slows down to 2.6 ns when the output load increases to 45 pF. One can choose to speed up the rise/fall time to 1.83 ns by then increasing the drive strength setting on the SiT8924.

The SiT8924 can support up to 60 pF in maximum capacitive loads with drive strength settings. Refer to the [Rise/Fall Time Tables \(Table 7 to Table 11\)](#) to determine the proper drive strength for the desired combination of output load vs. rise/fall time.

SiT8924 Drive Strength Selection

Tables 7 through 11 define the rise/fall time for a given capacitive load and supply voltage.

- Select the table that matches the SiT8924 nominal supply voltage (1.8 V, 2.5 V, 2.8 V, 3.0 V, 3.3 V).
- Select the capacitive load column that matches the application requirement (5 pF to 60 pF)
- Under the capacitive load column, select the desired rise/fall times.
- The left-most column represents the part number code for the corresponding drive strength.
- Add the drive strength code to the part number for ordering purposes.

Calculating Maximum Frequency

Based on the rise and fall time data given in Tables 7 through 11, the maximum frequency the oscillator can operate with guaranteed full swing of the output voltage over temperature can be calculated as follows:

$$\text{Max Frequency} = \frac{1}{5 \times \text{Trf}_{20/80}}$$

where Trf_{20/80} is the typical value for 20%-80% rise/fall time.

Example 1

Calculate f_{MAX} for the following condition:

- V_{dd} = 1.8 V ([Table 7](#))
- Capacitive Load: 30 pF
- Desired Tr/f time = 3 ns (rise/fall time part number code = E)

Part number for the above example:

SiT8924BIE12-18E-66.666660

↑
Drive strength code is inserted here. Default setting is “-”

SiT8924B Automotive AEC-Q100 Oscillator

Pin 1 Configuration Options (OE, \overline{ST} , or NC)

Pin 1 of the SiT8924 can be factory-programmed to support three modes: Output enable (OE), standby \overline{ST} or No Connect (NC). These modes can also be programmed with the [Time Machine II](#) using [Field Programmable Oscillators](#).

Output Enable (OE) Mode

In the OE mode, applying logic Low to the OE pin only disables the output driver and puts it in Hi-Z mode. The core of the device continues to operate normally. Power consumption is reduced due to the inactivity of the output. When the OE pin is pulled High, the output is typically enabled in $<1 \mu\text{s}$.

Standby (\overline{ST}) Mode

In the \overline{ST} mode, a device enters into the standby mode when Pin 1 pulled Low. All internal circuits of the device are turned off. The current is reduced to a standby current, typically in the range of a few μA . When \overline{ST} is pulled High, the device goes through the “resume” process, which can take up to 5 ms.

No Connect (NC) Mode

In the NC mode, the device always operates in its normal mode and output the specified frequency regardless of the logic level on pin 1.

Table 12 below summarizes the key relevant parameters in the operation of the device in OE, \overline{ST} , or NC mode.

Table 12. OE vs. \overline{ST} vs. NC

| | OE | \overline{ST} | NC |
|---|--------|-------------------|--------|
| Active current 20 MHz (max, 1.8 V) | 4.5 mA | 4.5 mA | 4.5 mA |
| OE disable current (max. 1.8 V) | 4.3 mA | N/A | N/A |
| Standby current (typical 1.8 V) | N/A | 0.6 μA | N/A |
| OE enable time at 110 MHz (max) | 130 ns | N/A | N/A |
| Resume time from standby (max, all frequency) | N/A | 5 ms | N/A |
| Output driver in OE disable/standby mode | High Z | Weak pull-down | N/A |

Output on Startup and OE Enable

The SiT8924 comes with gated output. Its clock output is accurate to the rated frequency stability within the first pulse from initial device startup or when the output driver is enabled.

In addition, the SiT8924 supports “no runt” pulses and “no glitch” output during startup or when the device output driver is enabled as shown in the waveform captures in [Figure 17](#) and [Figure 18](#).

Notes:

12. Top marking: Y denotes manufacturing origin and XXXX denotes manufacturing lot number. The value of "Y" will depend on the assembly location of the device.
13. A capacitor of value 0.1 μF or higher between Vdd and GND is required.

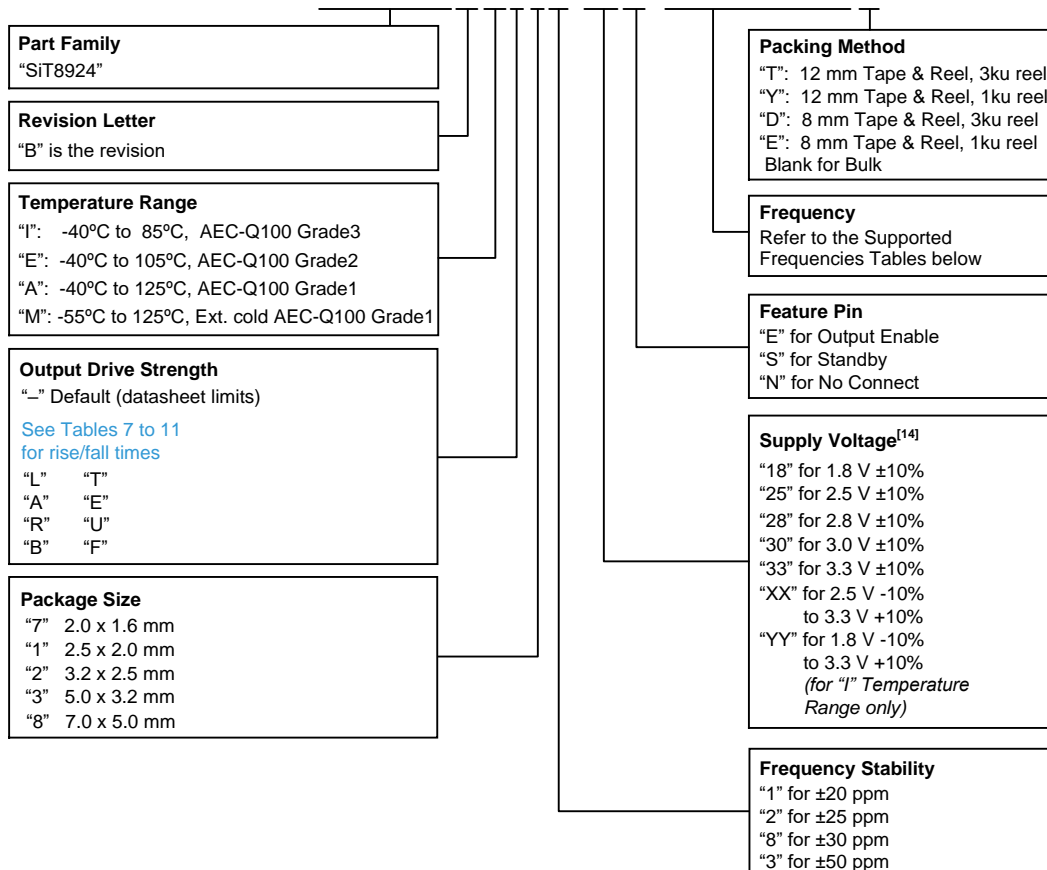

SiT8924B Automotive AEC-Q100 Oscillator

Ordering Information

The following part number guide is for reference only. To customize and build an exact part number, use the SiTime [Part Number Generator](#).

SiT8924BA-12-18E -66.666666D

Note:

14. The voltage portion of the SiT8924 part number consists of two characters that denote the specific supply voltage of the device. Across all temperature ranges, the SiT8924 supports either 1.8 V ±10% or any voltage between 2.25 V and 3.62 V. In the 1.8 V mode, one can simply insert 18 in the part number. In the 2.5 V to 3.3 V mode, two digits such as 18, 25 or 33 can be used in the part number to reflect the desired voltage. Alternatively, "XX" can be used to indicate the entire operating voltage range from 2.25 V to 3.63 V. Supply voltage "YY" can be used to indicate the entire operating voltage range from 1.62 V to 3.63 V, available for temperature range -40°C to 85°C only.

Table 18. Revision History

| Revision | Release Date | Change Summary |
|----------|--------------|--|
| 0.1 | 19-May-2015 | Final production release |
| 1.3 | 18-Mar-2016 | Added the industrial temperature “-40°C to ±85°C” option Added support for ±20 ppm frequency stability Added 12 and 16 mm T&R information to Table 16 |
| 1.5 | 14-Dec-2016 | Changed Clock Generator to SOT23 Oscillator |
| 1.6 | 18-Jul-2018 | Added Standby mode option Removed center lines from the package drawings Revised description of temperature range options Updated logo and company address, links and other page layout changes |
| 1.7 | 22-May-2019 | Updated package dimensions Revised startup time specification |
| 1.71 | 1-Jan-2023 | Updated company disclaimer, links, references and icons |
| 1.72 | 4-Sep-2023 | Updated Ordering Information with YY option in Supply Voltage box, and Note 14 |

SiTime assumes no responsibility or liability for any loss, damage or defect of a Product which is caused in whole or in part by (i) use of any circuitry other than circuitry embodied in a SiTime product, (ii) misuse or abuse including static discharge, neglect or accident, (iii) unauthorized modification or repairs which have been soldered or altered during assembly and are not capable of being tested by SiTime under its normal test conditions, or (iv) improper installation, storage, handling, warehousing or transportation, or (v) being subjected to unusual physical, thermal, or electrical stress.

Disclaimer: SiTime makes no warranty of any kind, express or implied, with regard to this material, and specifically disclaims any and all express or implied warranties, either in fact or by operation of law, statutory or otherwise, including the implied warranties of merchantability and fitness for use or a particular purpose, and any implied warranty arising from course of dealing or usage of trade, as well as any common-law duties relating to accuracy or lack of negligence, with respect to this material, any SiTime product and any product documentation. This product is not suitable or intended to be used in a life support application or component, to operate nuclear facilities, in military or aerospace applications, or in other mission critical applications where human life may be involved or at stake. All sales are made conditioned upon compliance with the critical uses policy set forth below.

CRITICAL USE EXCLUSION POLICY

BUYER AGREES NOT TO USE SITIME'S PRODUCTS FOR ANY APPLICATION OR IN ANY COMPONENTS: USED IN LIFE SUPPORT DEVICES, TO OPERATE NUCLEAR FACILITIES, FOR MILITARY OR AEROSPACE USE, OR IN OTHER MISSION CRITICAL APPLICATIONS OR COMPONENTS WHERE HUMAN LIFE OR PROPERTY MAY BE AT STAKE.

For aerospace and defense applications, SiTime recommends using only [Endura™ ruggedized products](#).

SiTime owns all rights, title and interest to the intellectual property related to SiTime's products, including any software, firmware, copyright, patent, or trademark. The sale of SiTime products does not convey or imply any license under patent or other rights. SiTime retains the copyright and trademark rights in all documents, catalogs and plans supplied pursuant to or ancillary to the sale of products or services by SiTime. Unless otherwise agreed to in writing by SiTime, any reproduction, modification, translation, compilation, or representation of this material shall be strictly prohibited.

Silicon MEMS Outperforms Quartz

Supplemental Information

The Supplemental Information section is not part of the datasheet and is for informational purposes only.

Silicon MEMS Outperforms Quartz

Best Reliability

Silicon is inherently more reliable than quartz. Unlike quartz suppliers, SiTime has in-house MEMS and analog CMOS expertise, which allows SiTime to develop the most reliable products. Figure 1 shows a comparison with quartz technology.

Why is SiTime Best in Class:

- SiTime’s MEMS resonators are vacuum sealed using an advanced EpiSeal® process, which eliminates foreign particles and improves long term aging and reliability
- World-class MEMS and CMOS design expertise

Figure 1. Reliability Comparison^[1]

Best Aging

Unlike quartz, MEMS oscillators have excellent long term aging performance which is why every new SiTime product specifies 10-year aging. A comparison is shown in Figure 2.

Why is SiTime Best in Class:

- SiTime’s MEMS resonators are vacuum sealed using an advanced EpiSeal® process, which eliminates foreign particles and improves long term aging and reliability
- Inherently better immunity of electrostatically driven MEMS resonator

Figure 2. Aging Comparison^[2]

Best Electro Magnetic Susceptibility (EMS)

SiTime’s oscillators in plastic packages are up to 54 times more immune to external electromagnetic fields than quartz oscillators as shown in Figure 3.

Why is SiTime Best in Class:

- Internal differential architecture for best common mode noise rejection
- Electrostatically driven MEMS resonator is more immune to EMS

Figure 3. Electro Magnetic Susceptibility (EMS)^[3]

Best Power Supply Noise Rejection

SiTime’s MEMS oscillators are more resilient against noise on the power supply. A comparison is shown in Figure 4.

Why is SiTime Best in Class:

- On-chip regulators and internal differential architecture for common mode noise rejection
- MEMS resonator is paired with advanced analog CMOS IC

Figure 4. Power Supply Noise Rejection^[4]

Silicon MEMS Outperforms Quartz

Best Vibration Robustness

High-vibration environments are all around us. All electronics, from handheld devices to enterprise servers and storage systems are subject to vibration. Figure 5 shows a comparison of vibration robustness.

Why is SiTime Best in Class:

- The moving mass of SiTime’s MEMS resonators is up to 3000 times smaller than quartz
- Center-anchored MEMS resonator is the most robust design

Figure 5. Vibration Robustness^[5]

Figure labels:

- TXC = TXC
- Epson = EPSN
- Connor Winfield = CW
- Kyocera = KYCA
- SiLabs = SLAB
- SiTime = EpiSeal MEMS

Best Shock Robustness

SiTime’s oscillators can withstand at least 50,000 g shock. They all maintain their electrical performance in operation during shock events. A comparison with quartz devices is shown in Figure 6.

Why is SiTime Best in Class:

- The moving mass of SiTime’s MEMS resonators is up to 3000 times smaller than quartz
- Center-anchored MEMS resonator is the most robust design

Figure 6. Shock Robustness^[6]

Silicon MEMS Outperforms Quartz

Notes:

1. Data source: Reliability documents of named companies.
2. Data source: SiTime and quartz oscillator devices datasheets.
3. Test conditions for Electro Magnetic Susceptibility (EMS):
 - According to IEC EN61000-4.3 (Electromagnetic compatibility standard)
 - Field strength: 3V/m
 - Radiated signal modulation: AM 1 kHz at 80% depth
 - Carrier frequency scan: 80 MHz – 1 GHz in 1% steps
 - Antenna polarization: Vertical
 - DUT position: Center aligned to antenna

Devices used in this test:

| Label | Manufacturer | Part Number | Technology |
|--------------|-----------------|-----------------------------|--|
| EpiSeal MEMS | SiTime | SiT9120AC-1D2-33E156.250000 | MEMS + PLL |
| EPSN | Epson | EG-2102CA156.2500M-PHPAL3 | Quartz, SAW |
| TXC | TXC | BB-156.250MBE-T | Quartz, 3 rd Overtone |
| CW | Conner Winfield | P123-156.25M | Quartz, 3 rd Overtone |
| KYCA | AVX Kyocera | KC7050T156.250P30E00 | Quartz, SAW |
| SLAB | SiLab | 590AB-BDG | Quartz, 3 rd Overtone + PLL |

4. 50 mV pk-pk Sinusoidal voltage.

Devices used in this test:

| Label | Manufacturer | Part Number | Technology |
|--------------|--------------|----------------------------|------------|
| EpiSeal MEMS | SiTime | SiT8208AI-33-33E-25.000000 | MEMS + PLL |
| NDK | NDK | NZ2523SB-25.6M | Quartz |
| KYCA | AVX Kyocera | KC2016B25M0C1GE00 | Quartz |
| EPSN | Epson | SG-310SCF-25M0-MB3 | Quartz |

5. Devices used in this test:
same as EMS test stated in Note 3.
6. Test conditions for shock test:
 - MIL-STD-883F Method 2002
 - Condition A: half sine wave shock pulse, 500-g, 1ms
 - Continuous frequency measurement in 100 μ s gate time for 10 seconds

Devices used in this test:

 same as EMS test stated in Note 3.
7. Additional data, including setup and detailed results, is available upon request to qualified customer. Please contact productsupport@sitime.com.
